May 2026

Phase 2 of the National Security Renaissance Plan

SC

STRIDER CAPITAL

Capital must flow at scale into America's  
National Security Innovation Engine.

SC

STRIDER CAPITAL

# Take the Shot

National Security underwrites  
the future prosperity of America.

Our innovation engine is a  
core asymmetric advantage.

A paradigm shift in capital  
deployment is required for  
dominance.

SC

# A Decisive Plan to Win

1. Create the National Security Asset Class
2. Establish a National Security Sovereign Wealth Fund
3. Optimize Corporate Capital Structures
4. Launch Global Investment Corps
5. Direct Allied Nation Capital into Strategic Sectors

# The Time for a New Asset Class is Now

1890'S

## Infrastructure & Real Assets

Build the industrial  
world

1970'S

## Private Equity & Venture Capital

Accelerate invention of  
new technologies

1980'S

## High Yield & Mortgage Bonds

Increase access to  
growth capital and home  
ownership

2010'S

## Digital Currencies

Decentralize capital,  
ownership, and trust

NOW

## National Security

Fund technologies to  
keep America sovereign  
and strong

Asset Classes are civilizational directives. We are entering a finite game where the current directive is security, resilience, and power.

STRIDER CAPITAL

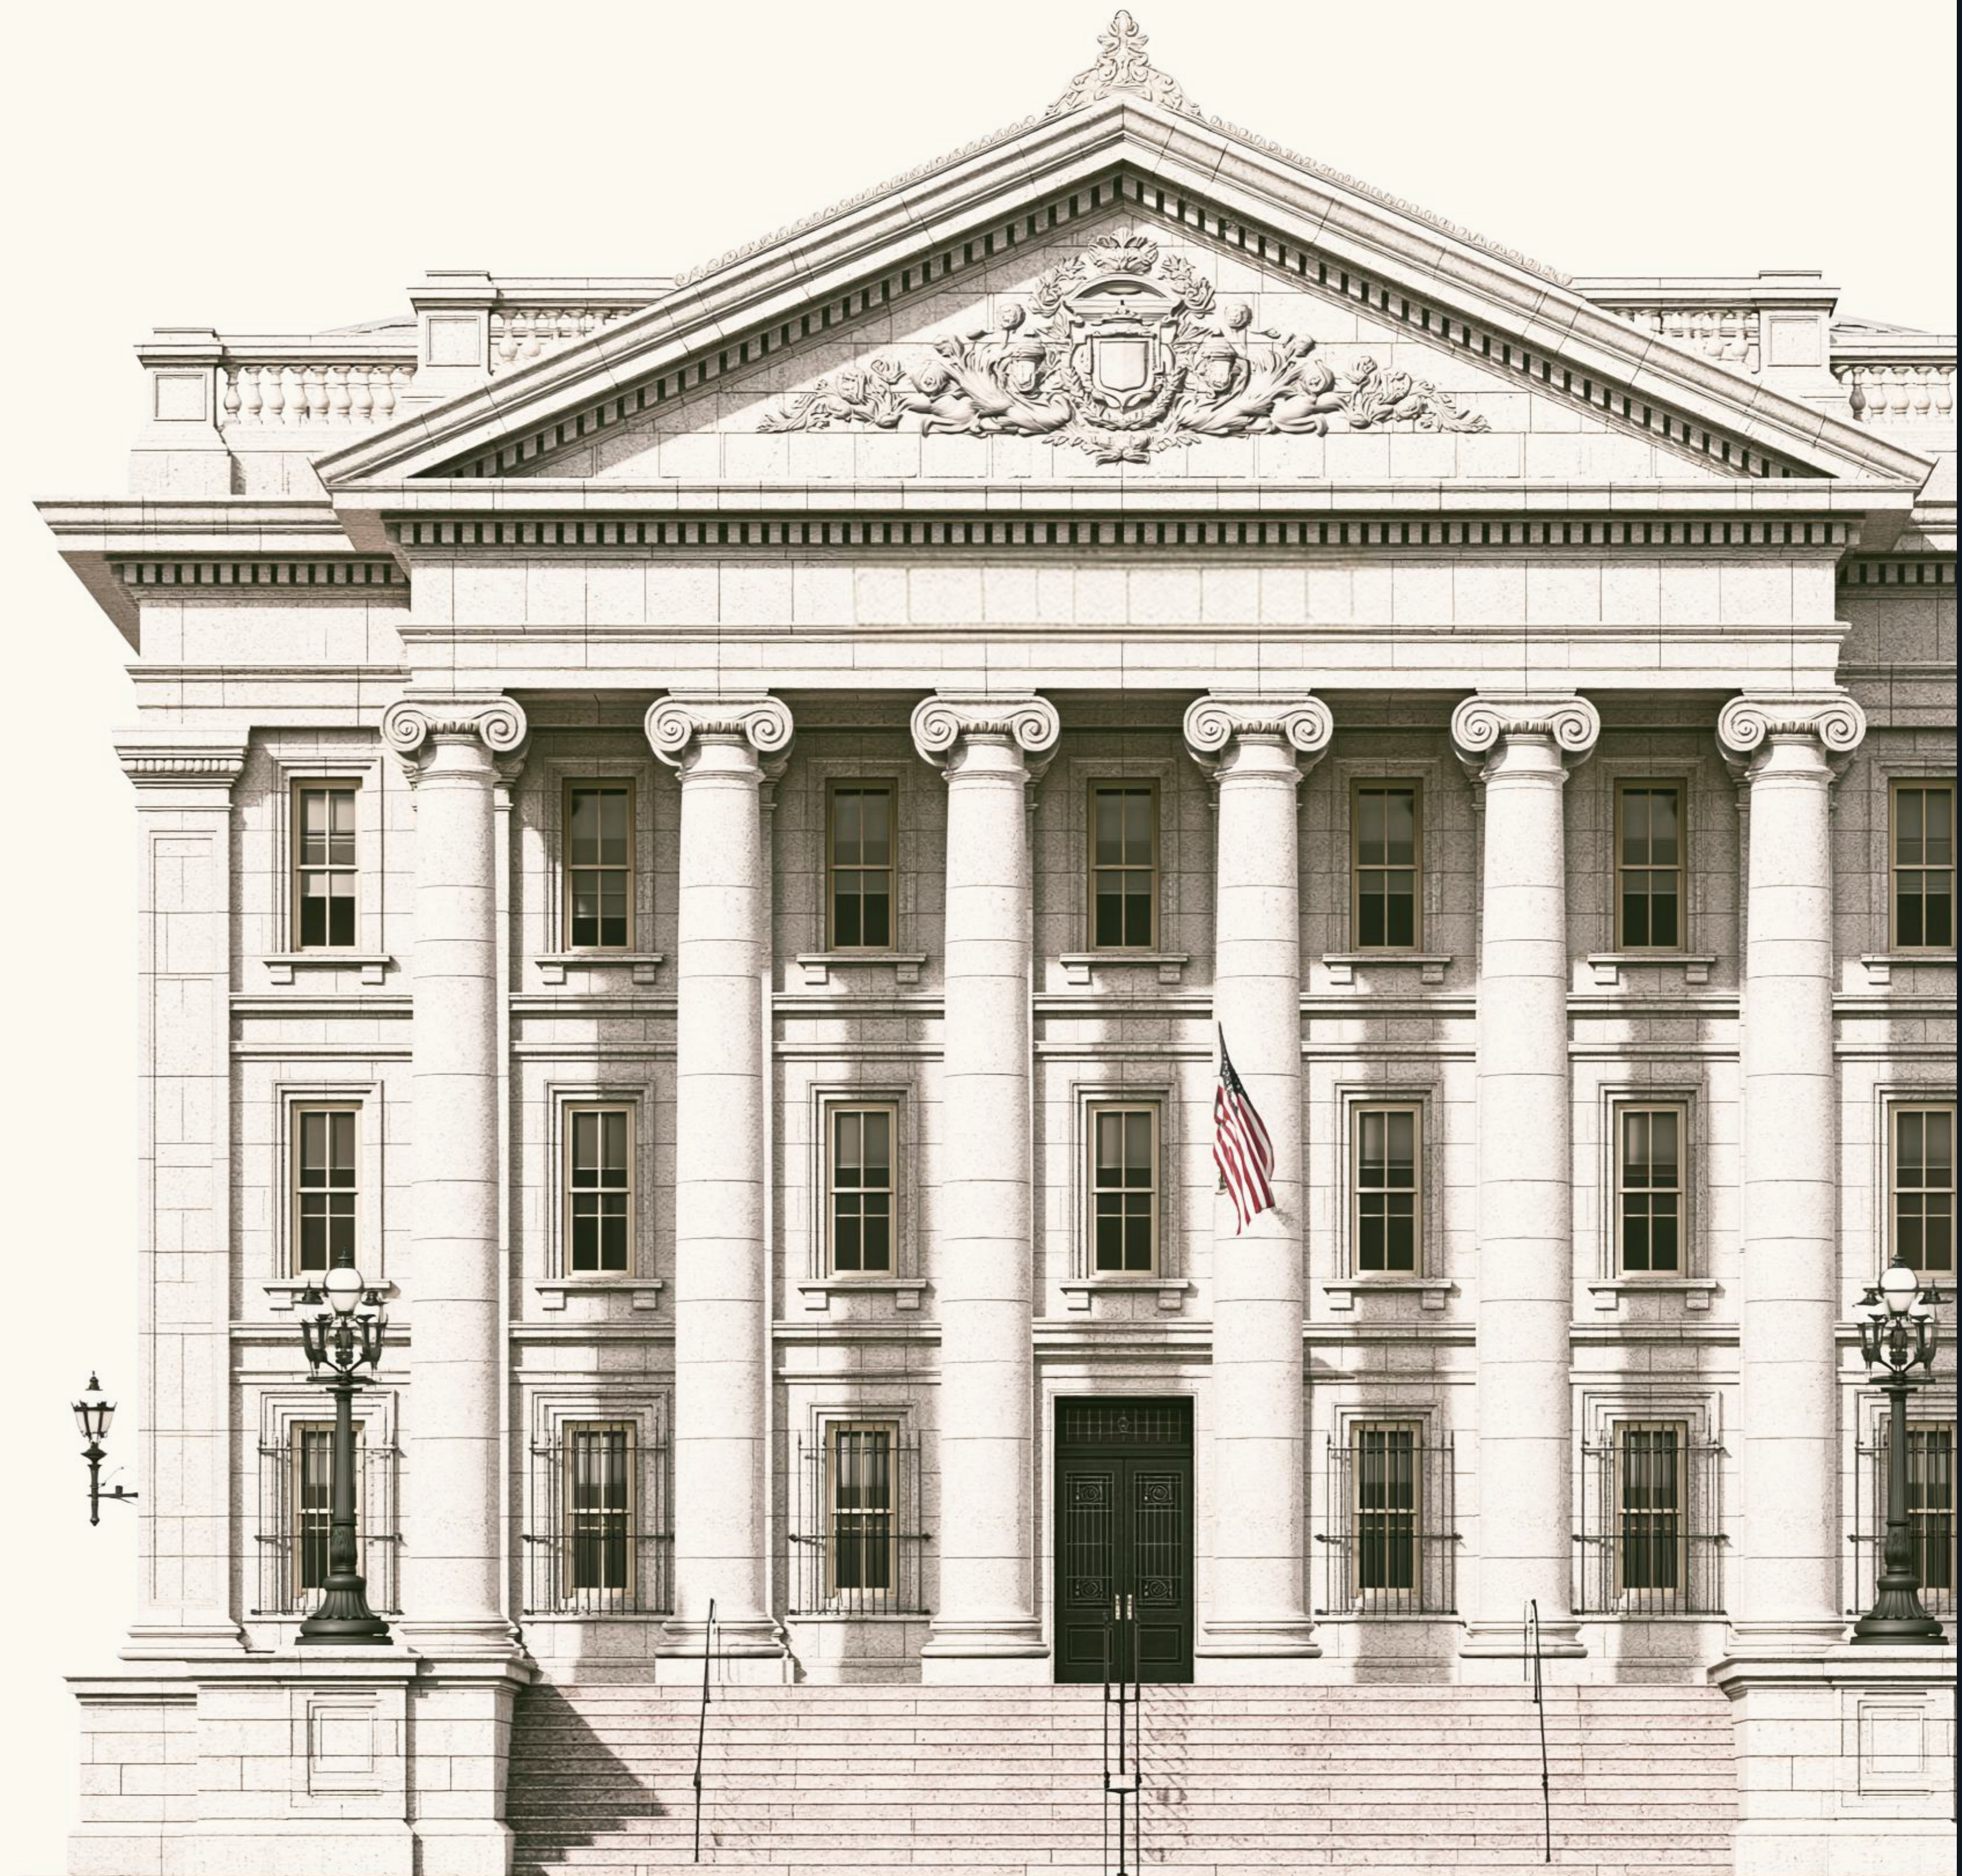

# The Critical First Step

SC

# Create the National Security Asset Class

1. Establish a National Security Equity (NSE) tax class
2. Change Long Term Capital Gains Tax Rate on NSE to 10% for US taxpayers
3. Create a Qualified National Security Stock (QNSS) designation that stacks on QSBS to double the 100% capital gains exclusion

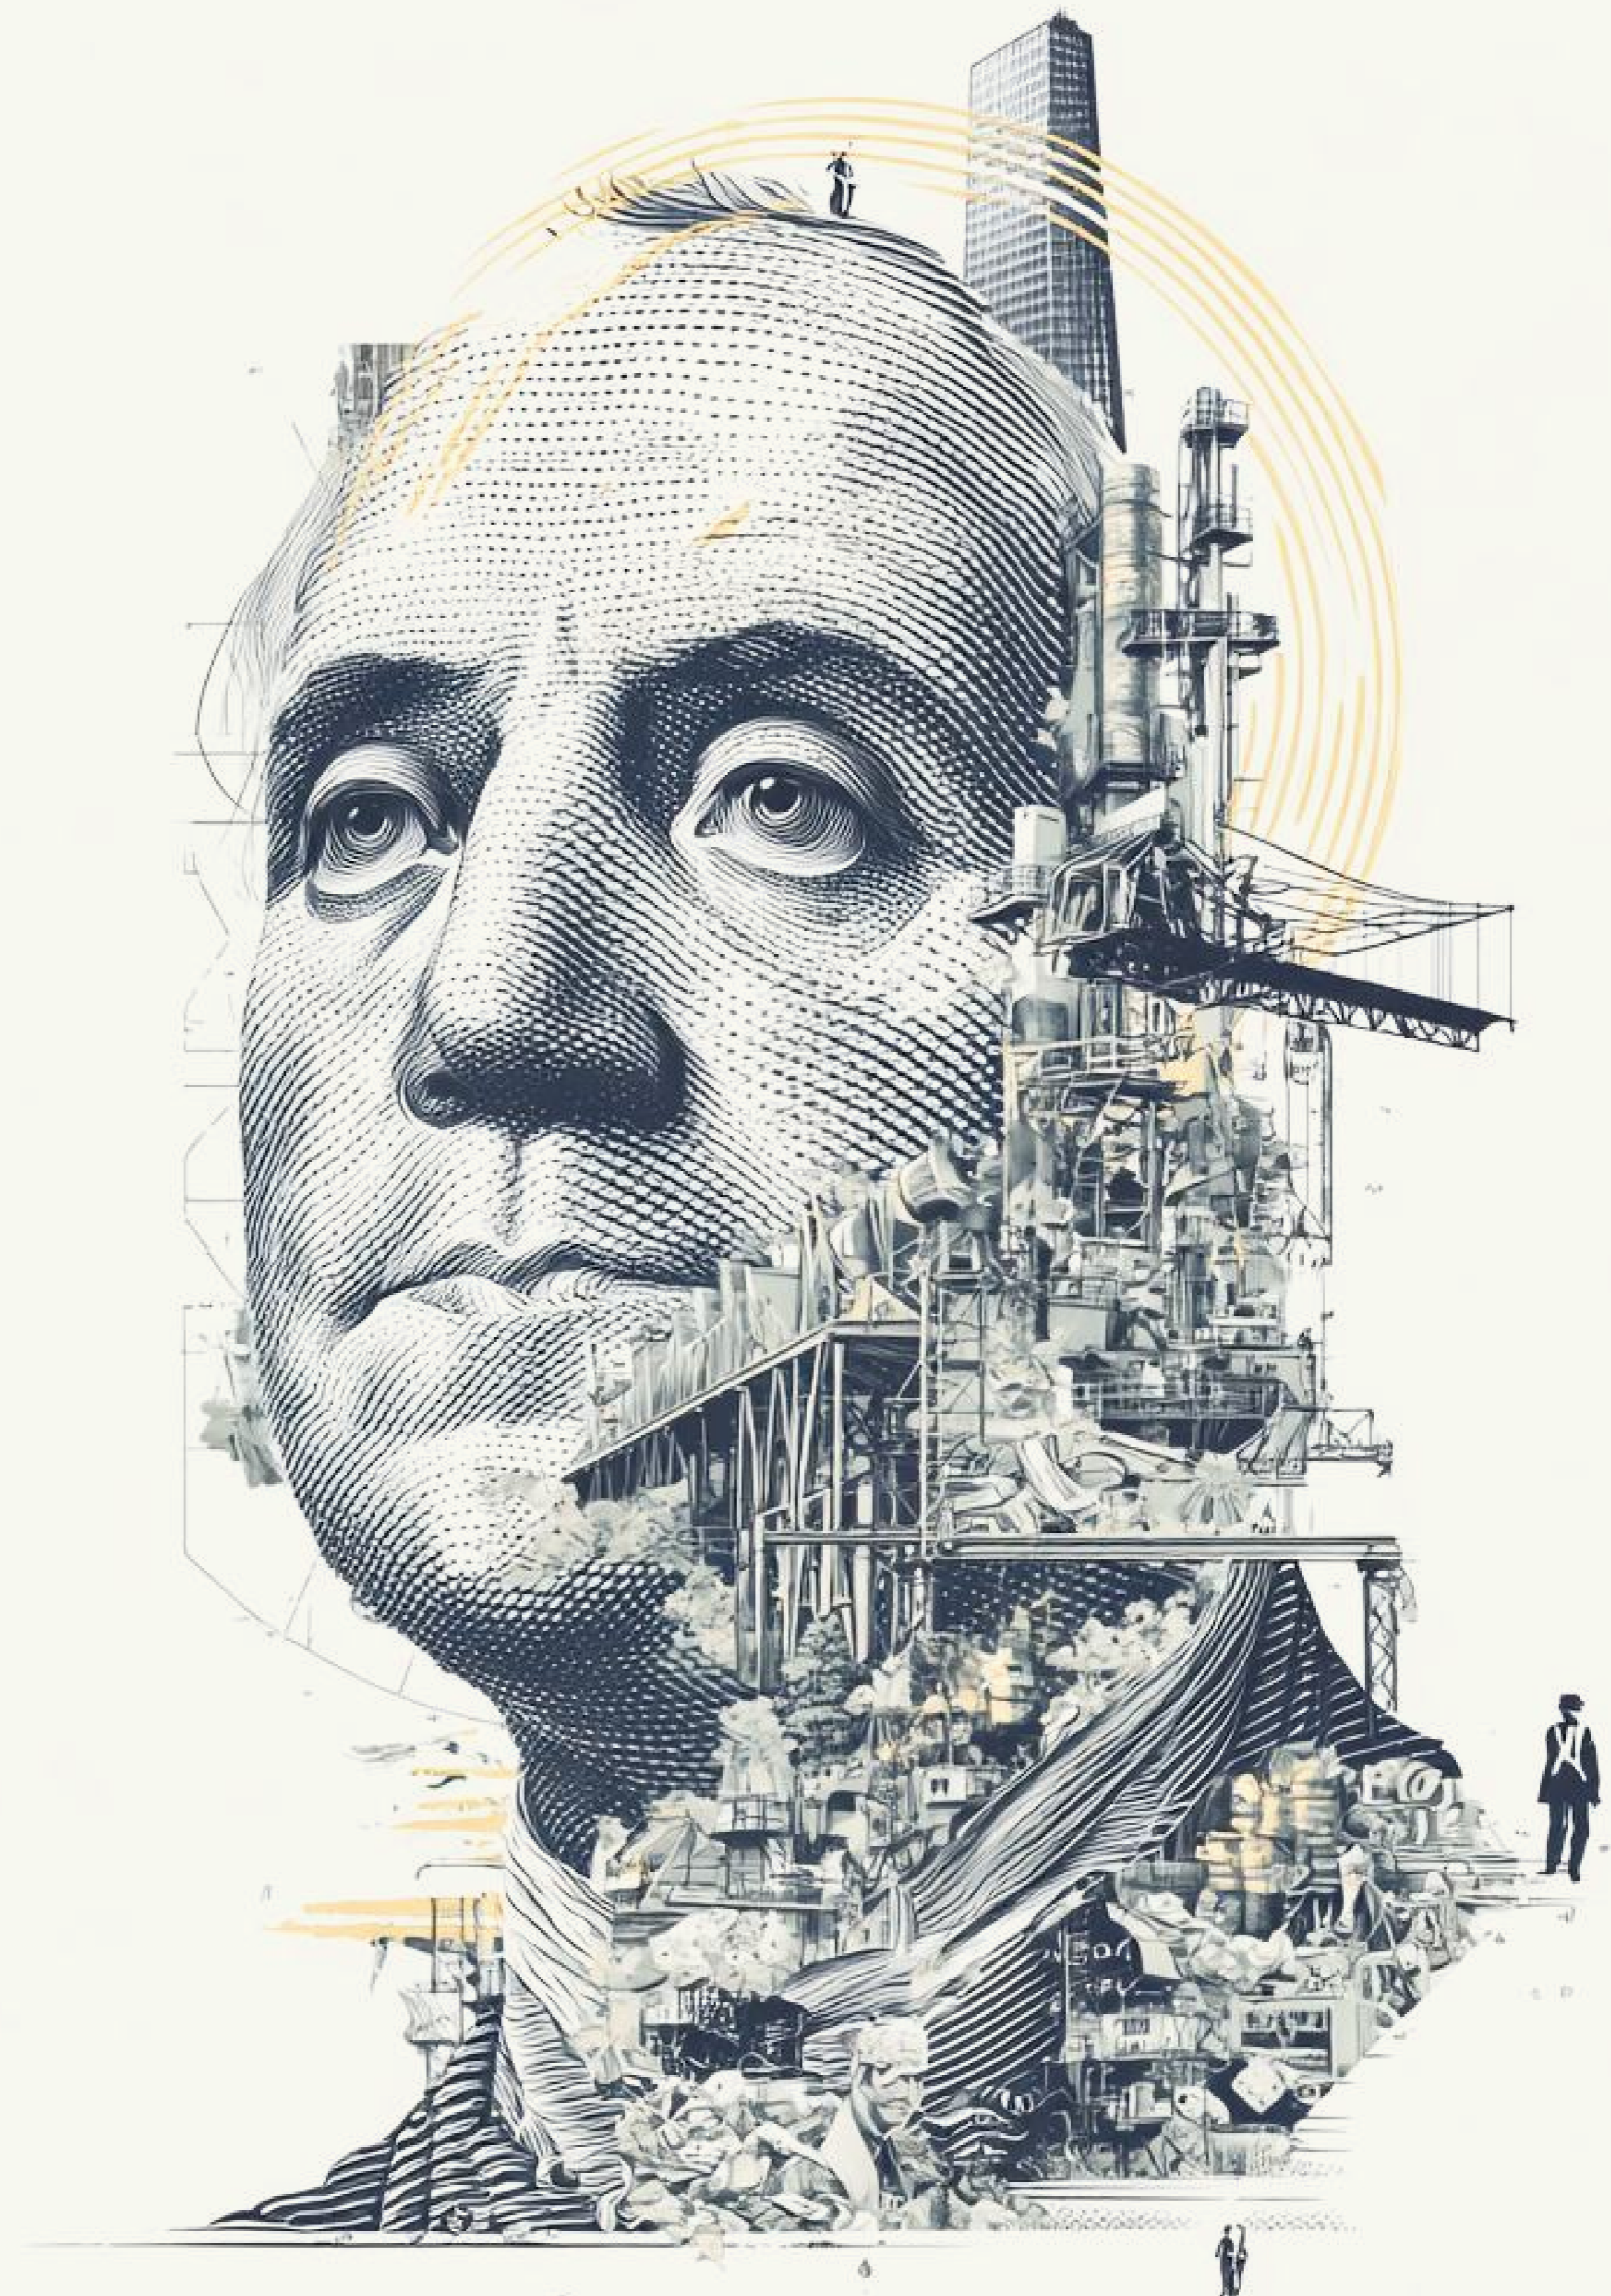

NSE becomes a standard allocation for investors.  
National Security becomes a \$10 trillion asset class.

# Establish a National Security Sovereign Wealth Fund

1. Launch a NatSec Sovereign Wealth Fund (NS-SWF) as permanent capital to invest only in public and private NSE companies
2. Direct company warrants and corporate equity from government contracts into NS-SWF
3. Enable dedicated access for American households through pre-tax payroll deductions and tax refunds

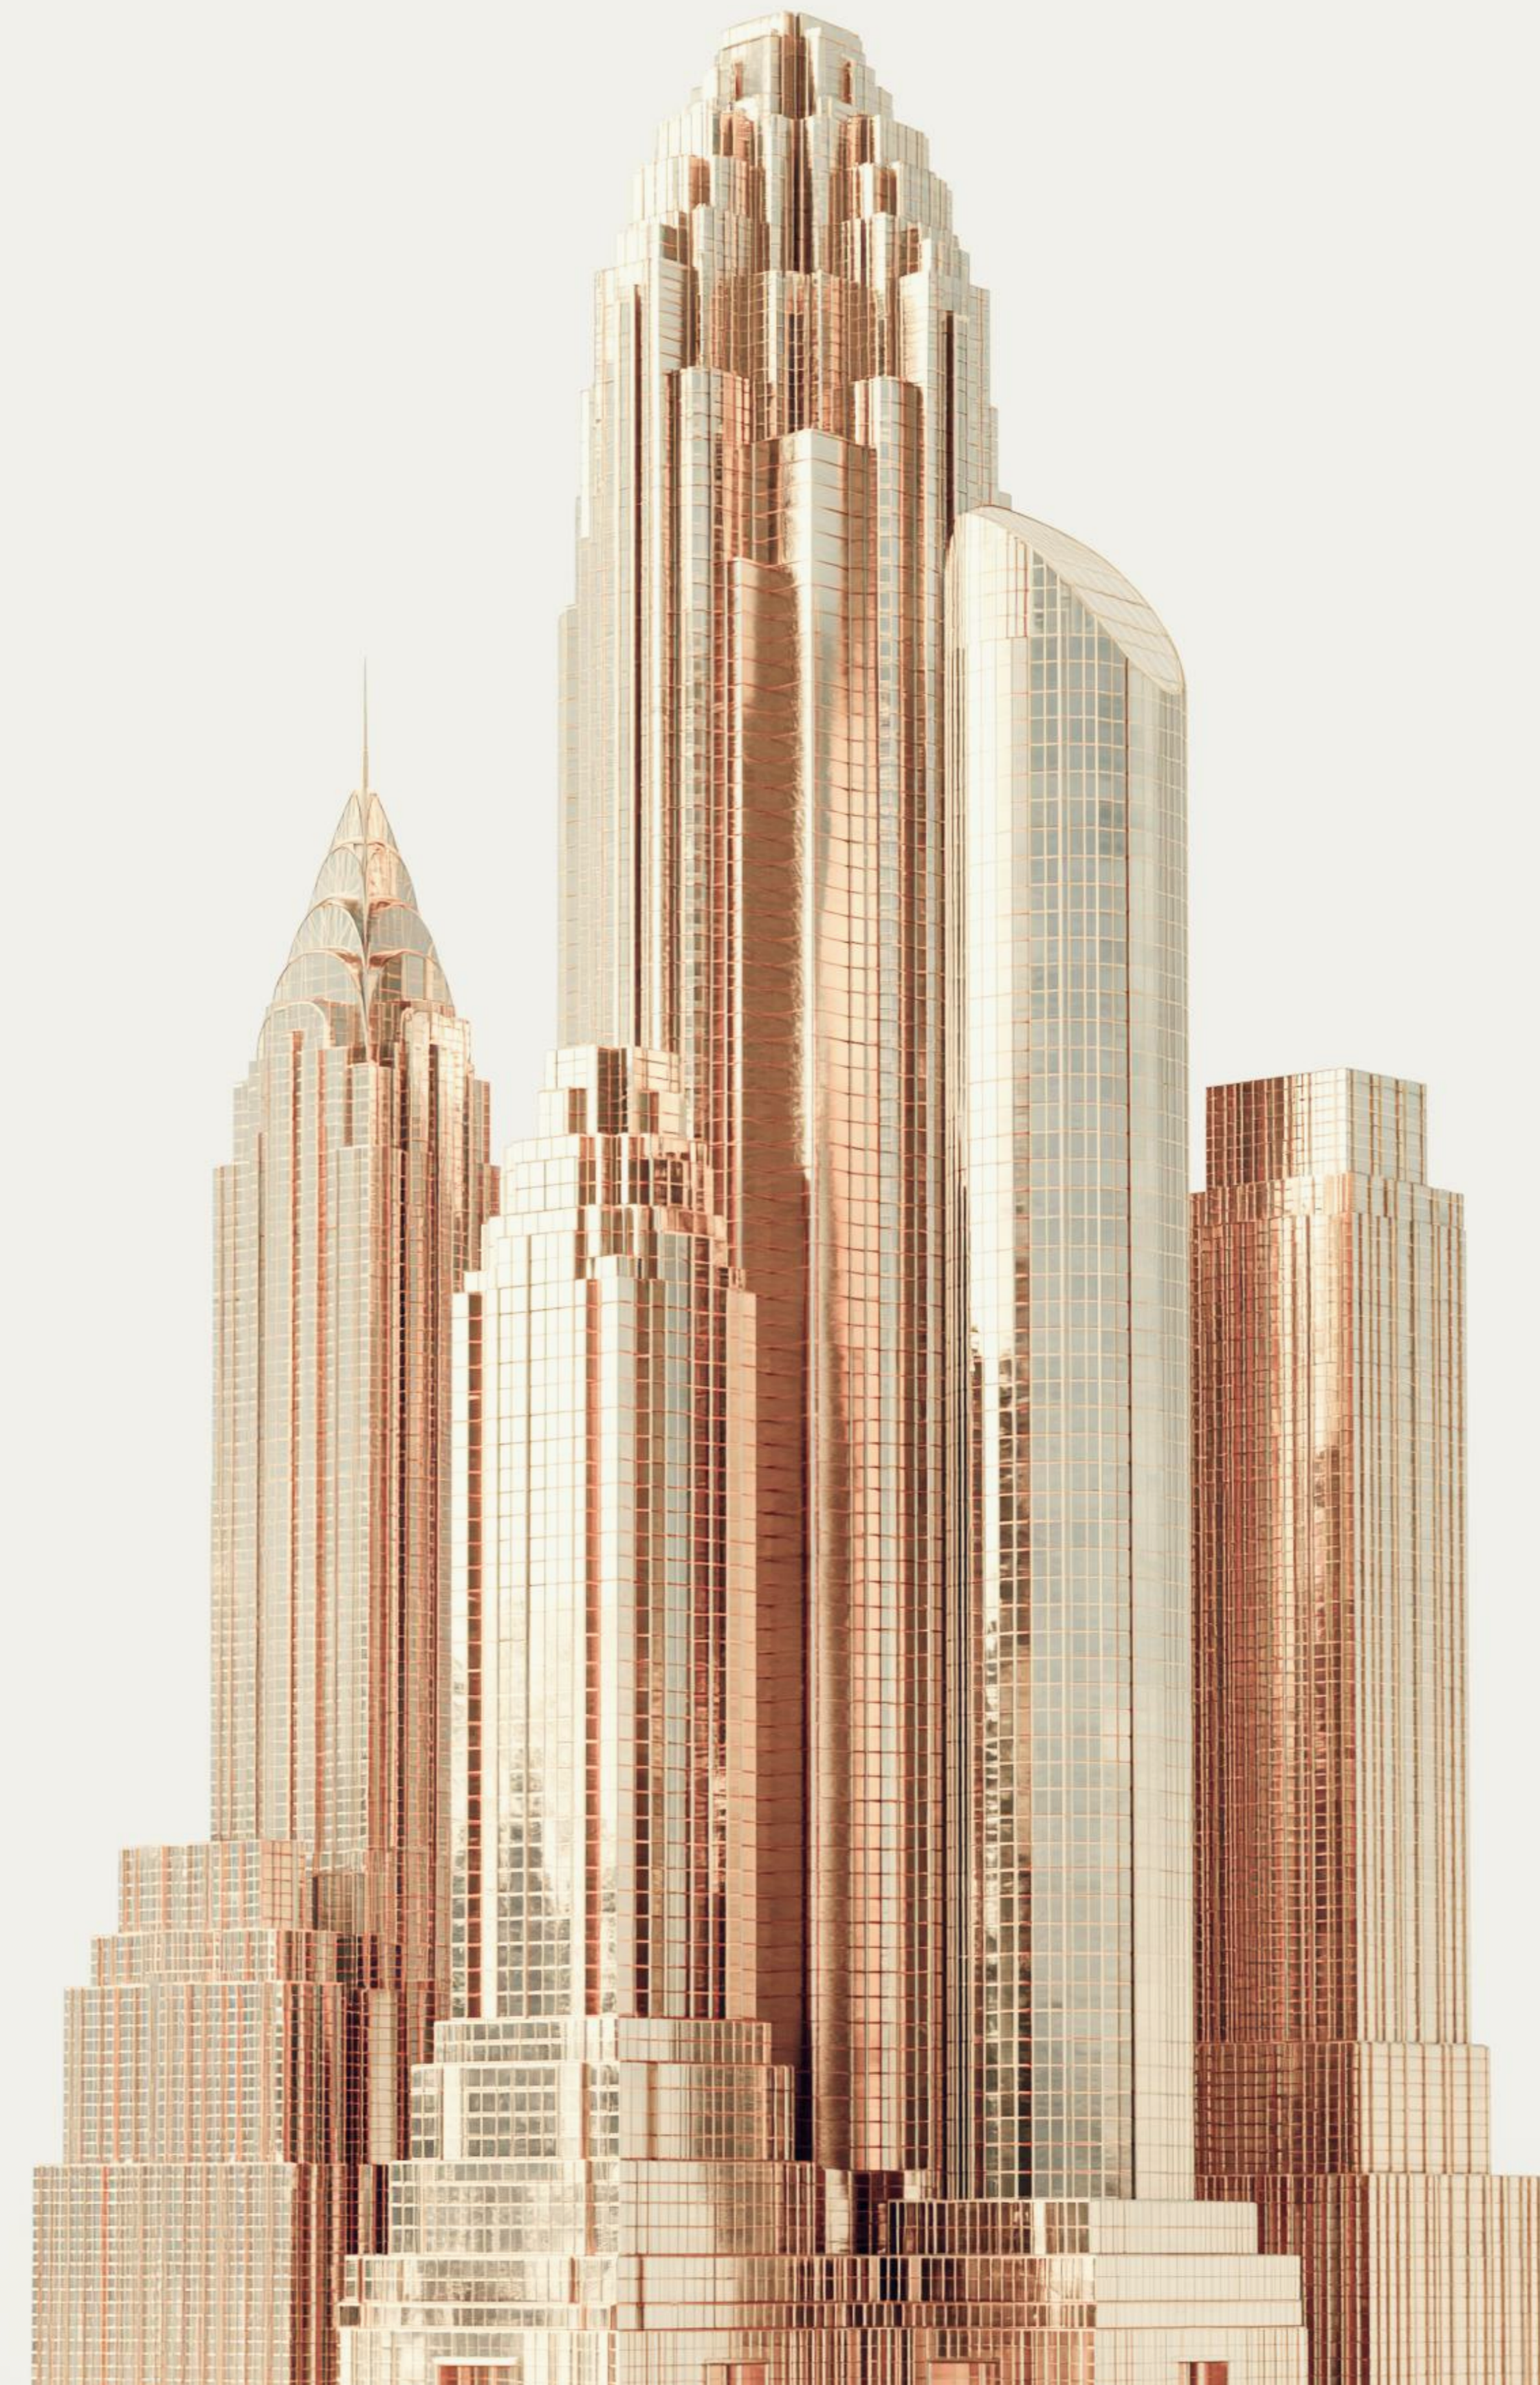

A sovereign wealth system channels capital into national outcomes, compounding enduring value for the country and its citizens.

# Optimize Corporate Capital Structures

1. Lower corporate tax rate on NSE profits, increasing capital flows into strategic R&D
2. Create an equity tax shield to shrink the debt-equity tax bias in NSE companies
3. Accelerate Year 1 capex deductions to 100% to improve industrial base project economics
4. Tie tax credits to measurable outputs to ensure strategic alignment with national priorities

Lower cost of capital increases National Security project velocity and de-risks the supply chain.

# Launch Global Investment Corps

1. Transform US foreign assistance into a Global National Security Investor Corps that captures frontier defense technologies
2. Launch a sovereign IP platform to harness, license, and scale technologies worldwide
3. Set up an International Investment Fund with pooled private sector capital

America funds the world's most critical technologies  
and runs the premier IP platform to scale them.

# Direct Allied Nation Capital into Strategic Sectors

1. Give NSE tax advantage to allied investors to co-invest alongside domestic capital
2. Create US guaranteed investment vehicles with allied governments and require on-shore deployment
3. Link on-shore vehicles to defined technological priorities (e.g. Energy, Manufacturing)

Dedicated national security sector-focused vehicles channel allied capital to domestic priorities.
